Century Capital, LLC performance figures are a composite of all customer accounts under management. Returns are time weighted to account for the average daily balance we invested for our clients during the period. Returns are net of all fees which include our asset management fee plus all costs paid to third parties (trading commissions, estimated mutual fund expenses, etc.) All interest, dividends and other income on investments are included in the return calculations.

Risk measurements are relative to the S&P 500 benchmark index. See the attached Composite.Pdf file for a detail of the characteristics of the composite based on the Morningstar rating system. Our client composite differs from the S&P index; the more significant differences include: (1) the S&P index does not include bonds, (2) the S&P index excludes stock in international companies and (3) the S&P does include fees for trading or investment management.

Past performance does not guarantee future results. Investment return and principal value will fluctuate and redemption value may be more or less than original cost. Individual account performance will vary from the composite primarily based on the selected asset allocation and risk tolerance profile.
